

# Reel to Reel - Circuit Processing

High volume applications/low cost production

## General Description

Teknoflex is the sole UK flexible circuit manufacturer with a high volume photo-imaging Reel to Reel production capability.

This equipment is able to produce single and double-sided circuits on a variety of dielectric films with a track and gap resolution of 75 micron in high volume.

## Benefits / Capability

- High volume production (330,000 square metres per annum)
- Low cost production
- Consistently high quality
- Track and gap resolution 75 micron (0.003 inches)
- Single and double-sided etch capability
- 610mm web width
- 12.5 micron to 70 micron or greater copper weight
- Minimum total laminate thickness 30 micron
- Dielectric films - polyimide (adhesive or adhesiveless), polyester, PEN, etc
- Roll lengths 75 metres to 160 metres

## Can We Help You?

If you have applications for medium to high volume single or double-sided circuits then Teknoflex has the potential with this facility to reduce your costs.

Please discuss your requirements with our sales and/or applications engineering personnel.
